

Novara Intrepid® Right-of-Way (ROW)

EFFICIENTLY CREATE, STORE, ACCESS AND
MAINTAIN RIGHT-OF-WAY RECORDS AND OTHER
PROJECT INFORMATION

← QUICKLY ACCESS ROW DATA

← ACCESS REAL-TIME INFO

← SECURE & WEB-BASED

Facilitate quick access to right-of-way data across the entire organization while easily maintaining accurate, consistent and up-to-date data in a format that can be readily shared and handed off.

Novara GeoSolutions (Novara) Intrepid® Right-of-Way (ROW) application is a powerful solution that helps users author, maintain, share, and understand pipeline project data related to the project's right-of-way. Users of this flexible solution have access to a robust set of tools that support real-time management of the right-of-way location, enable the upload and download of critical landowner agreements (and other documentation), and provide accessibility and visibility of key project data to a variety of users. Use of this tool helps an organization communicate and coordinate project work and drives efficiencies that can help reduce overall project costs.

Intrepid® ROW is a secure, web-based application that can be deployed as either an on premise or a cloud-hosted solution. It supports the spatial management of data, such as parcels, temporary workspace, and overall pipeline corridor, and provides a long list of detail about the data. The application also offers the capability to load, access, and share a number of other data elements, including landowner payment histories, landowner contact logs, project documentation, and history tracking. Through a single user interface, all of your project data can be accessed, maintained and made available to users throughout your organization, informing decisions and affecting safe operations of your pipelines.

Novara Intrepid® Right-of-Way (ROW)

Structured to meet your needs

Intrepid® ROW is completely tailored and configured to the user's environment and can be integrated into a structured database (such as PODS) or used with Esri data feature classes if a less complex solution is preferred.

Enhance business operations

Users will feel confident with the easy-to-use interface and straightforward presentation of reports and linked content. Users from across the organization will be able to view and analyze the same information, which can provide a complete and consistent project overview to field crews and senior management. Management can quickly and easily access information that is needed to shape key project details, such as route selection, project schedule or potential customer identification.

Understand and access data about your assets

By using this Intrepid® ROW, users can understand parcel histories by accessing information on previous owners, permission requests, and other formal and informal landowner agreements. This can be done on an individual parcel basis and can be quickly mapped.

Novara has the experience

Novara specializes in software solutions and consulting services with vast experience in the design, development and implementation of asset management and compliance reporting systems within a variety of industries. Our goal is to help you manage your asset data smarter, more efficiently, and more safely than ever before!

ADVANTAGES

- > Store and access pipeline data, aerial imagery, parcel data, and other critical data
- > Track progress on parcels, agent activities, title searches, survey and overall project activities
- > Accurately map project right-of-ways, workspace, access roads, etc
- > Store information in a format that can be easily transitioned to the GIS group once a project is complete
- > Provides accessibility and management system for key ROW documents
- > Supports pipeline operators during audits
- > Generate customized reports that offer meaningful and timely project details
- > Helps coordinate project work and help reduce overall project costs

KEEP STAFF INFORMED, YOUR ROW DATA CURRENT, AND THE PROCESS MANAGEABLE WITH THIS POWERFUL SOLUTION!
